

*A very simple and effective water management tool. Your horse's water will stay warmer under cold conditions and will stay cooler in the heat of summer.*

Our Performance One bucket holder includes a 5 gallon bucket and also includes a heat retention cover. The horse drinks from a “well” formed into the cover. Even on the coldest days, your horse should have adequate time to consume all the water you place before it. You know how much water your horse is taking

The body is foam-filled poly construction — solid and indestructible. Foam insulation with an R value of 7.5 per inch fills all sides and the bottom. The most effective ultraviolet inhibitor allows years of outdoor use as well.

Pre-formed mounting holes on an open flange allow for quick and sturdy installation. Our

bucket holder stands firmly on the ground as well.

Performance One has a smooth taper to a hole in the center of the holder. This design assures total water drainage for complete and easy cleaning — no hidden standing water resulting in mosquitoes.

When our Performance One bucket holder is filled with foam, a rigid fixture is used to evenly distribute material. Our sidewalls are smooth. Our overall workmanship is superb.

We've Been Selling Automatic Drinkers for Decades but We're Proud of our Bucket as Well!
